

People Who Become Symptomatic of Covid-19 Onsite

All members of the educational establishment including staff and pupils will be continually supported to understand the symptoms to look for and clear advice will be provided on how to respond if symptoms become apparent while on-site.

If anyone becomes unwell with a new, continuous cough or a high temperature/fever or anosmia (a loss or a change in your normal sense of smell, which can also affect your sense of taste) in an educational setting, they and any members of their household within that school setting must be sent home and advised to follow the PHA guidance for households with possible coronavirus infection. Settings should keep a full record of such actions and request a parent / carer / guardian record their acknowledgement of this action.

A child awaiting collection will be moved to a room where they can be isolated behind a closed door (Accelerated Reading library). Appropriate adult supervision will be provided. A window will be opened for ventilation. If it is not possible to fully isolate the child, they will be moved to an area which is at least 2m away from other people. A risk assessment will be undertaken by the school to address this. The school will fully document this process to ensure a record is held of who made the decision, who was contacted, who provided supervision and who picked up the child.

If the child needs to go to the bathroom while waiting to be collected, they will use a separate bathroom which will be cleaned and disinfected before being used by anyone else.

PPE will be worn by staff caring for the child while they await collection if direct personal care is needed and a distance of 2m cannot be maintained (such as for a very young child or a child with complex needs).

If the child is seriously ill or injured or their life is at risk, the school will call 999.

If a member of staff (who was wearing the appropriate PPE and adhering to the social distancing guidelines) has helped someone with a new, continuous cough or a high temperature or loss of taste/smell, they do not need to go home unless they develop symptoms themselves. They will wash their hands thoroughly for 20 seconds after any contact with someone who has developed symptoms. Cleaning the affected area with available cleaning products, followed by disinfection after someone with symptoms has left will reduce the risk of passing the infection on to other people.

Test, Trace and Protect

Pupils and staff who exhibit any symptoms associated with COVID-19 should not attend school. The N.I. Executive has rolled out a Test and Trace and Protect strategy designed to control the spread of COVID-19 and symptomatic staff are expected to follow the advice and obtain a test for COVID-19.

Where an individual has had a negative result, it is important to still apply caution. If everyone with symptoms who was tested in their household receive a negative result,

the pupil or member of staff can return to work providing they are well enough and have not had a fever for 48 hours.

Anyone who tests positive will be contacted by the Contact Tracing Service in the Public Health Agency, and will need to share information about their recent interactions. This could include household members, people with whom you have been in direct contact, or been within 2 metres for more than 15 minutes. Passing in corridors and short periods of contact does not therefore present a significant risk to staff or pupils. All household members should follow PHA isolation guidance which currently requires everyone in the house to stay at home. Isolation guidance will then be provided that is context specific and may result in friendship groups, regular contacts and potentially an entire class or 'bubble' being instructed to self-isolate at home.

Summary Guidance:

- if you have symptoms of coronavirus or a positive test, you will need to stay at home for at least 10 days;
- if you live with someone who has symptoms or a positive test, you will need to stay at home for 14 days from the day the first person in the home started having symptoms;
- however, if you develop symptoms during this 14-day period, you will need to self-check in accordance with Test and Trace guidance and stay at home for 10 days from the day your symptoms started (regardless of what day you are on in the original 14-day period);
- 10 days after your symptoms started, if you do not have a high temperature, you do not need to continue to self-isolate. If you still have a high temperature, keep self-isolating until your temperature returns to normal. You do not need to self-isolate if you just have a cough after 10 days, as a cough can last for several weeks after the infection has gone;
- if you have symptoms and live with someone who is 70 or over, has a long-term condition, is pregnant or has a weakened immune system, try to find somewhere else they can stay for the 14-day isolation period;
- it is likely that people living within a household will infect each other or be infected already. Staying at home for 14 days will greatly reduce the overall amount of infection the household could pass on to others in the community.

Enhanced cleaning will be carried out within any classroom in which an individual who has developed COVID-19 has been to minimise risk of the spread of the virus. This will be clearly communicated to staff, parents and pupils to provide assurance that the environment is safe.

Pupils or members of staff can return to school when they have completed the necessary period of isolation as advised by the Test, Trace and Protect service. This will help contain any potential transmission to those staff/pupils and will also assist in protecting the wider community.
